FATİH KAYACI

.NET Backend Developer | C# | ASP.NET Core | Microservices

Istanbul, Türkiye · linkedin.com/in/fatihkayaci · github.com/fatihkayaci
· fatihkayaci.com · info@fatihkayaci.com · +90 5424846147

SUMMARY

Backend developer building C# / ASP.NET Core REST APIs and event-driven microservices with Clean Architecture and CQRS. Built RestaurantBill, a POS and kitchen display system running as a live demo and load-tested with k6 at 100 concurrent users with 0% errors. Also built a four-service microservice backend with RabbitMQ, Redis and a YARP gateway. B.Sc. in Computer Engineering (2024), currently enrolled in an M.Sc. programme.

EXPERIENCE

Freelance Backend Developer 2026 – Present

E-commerce and corporate web projects · .NET 10 · Clean Architecture · CQRS · PostgreSQL · Docker · Next.js

- Developing an e-commerce platform end to end for a hair prosthesis retailer: .NET API, Next.js storefront and admin panel, with iyzico payment, SMS and Bunny CDN integrations. Not yet live.
- Building a corporate website for a construction company, including content management and project/reference modules. In development, not yet live.

Cyftech (Katsis) — Co-founder & Backend Developer 2023 – Present

Building management web application · Katsis product paused, company continues client work – 3-person venture · PHP, MySQL, Linux · katsis.com.tr

- Owned the backend end to end: REST API design, the relational data model and a multi-tenant structure.
- Set up and administered the Linux server and handled deployment and environment configuration myself.
- Worked across the full product cycle in a small team: requirements, architecture, development, testing and deployment.

IAS (Industrial Application Software) — Software Developer Intern Oct – Nov 2023

Istanbul · Enterprise ERP team · 6 developers + 1 manager

- Completed a structured training programme on the company's in-house development platform and contributed to the development of enterprise ERP modules.
- In the final phase of the internship, reviewed real customer requests and defect reports and took part in resolving them.

SELECTED PROJECTS

RestaurantBill — POS & Kitchen Display System Jan 2026 – Present

Live demo: sophram.com · GitHub: github.com/fatihkayaci/RestaurantBill

.NET 9 · Clean Architecture · CQRS/MediatR · SignalR · PostgreSQL · JWT · React 19 · Docker · GitHub Actions · xUnit · k6

- Built an end-to-end POS and kitchen display system (KDS) for restaurants; orders sync in real time between kitchen, waiter and cashier screens over SignalR. Deployed as a live demo.
- Wrote smoke, load and stress scenarios in k6: 0% errors and 3.7 s p(95) at 100 concurrent users on a 2 vCPU / 4 GB server.
- Traced a 25% error rate at 60–70 concurrent users on a 1 vCPU / 512 MB server to connection pool exhaustion and memory pressure. Also fixed an unrealistic test scenario (orders were never closed, so tables ran out), cutting p(95) from 2.95 s to 1.46 s.
- Made deliberate architectural choices: Result pattern instead of exceptions for expected failures, manual mapping instead of AutoMapper, and validation centralised in FluentValidation with a MediatR pipeline behaviour.
- Containerised with Docker Compose and set up CI/CD in GitHub Actions; secured endpoints with JWT role-based authorisation (Admin, Waiter, Kitchen, Cashier) and covered the domain layer with xUnit and Moq.

Online Learning Platform — Microservice E-Learning Backend 2026

GitHub: github.com/fatihkayaci/learning-platform

.NET 10 · Microservices · Clean Architecture · CQRS/MediatR · RabbitMQ · Redis · PostgreSQL · YARP · Serilog/Seq

- Designed the e-learning backend as four independent microservices (Identity, Catalog, Enrollment, Notification), each with its own PostgreSQL database, with traffic routed through a YARP API gateway.
- Used REST for synchronous calls and RabbitMQ.Client for asynchronous events (exchanges, durable queues, manual acknowledgement).
- Redis-backed idempotent event handling prevents duplicate processing; the Catalog service uses Redis caching and role-based authorisation.
- Documented architectural decisions in ADRs, sequence diagrams and an event catalogue.

TECHNICAL SKILLS

Languages & backend: C#, .NET 9/10, ASP.NET Core Web API, REST API, Entity Framework Core, LINQ, async/await, OOP, Dependency Injection

Architecture & practices: Clean Architecture, CQRS (MediatR), microservices, DDD, Repository + Unit of Work, SOLID, design patterns

Messaging & real-time: RabbitMQ message broker (exchange, durable queue, manual ack), SignalR (WebSocket)

Reliability & performance: Redis (cache, idempotency), k6 (load / stress / smoke testing)

Databases: PostgreSQL, MS SQL Server, EF Core migrations, SQL query optimisation

DevOps & infrastructure: Docker, Docker Compose, GitHub Actions CI/CD, Git, Linux server administration

Testing & validation: xUnit, Moq, FluentValidation, AAA pattern

Frontend & secondary: React 19, TypeScript, Tailwind CSS, React Native · PHP, MySQL

EDUCATION

Sivas Cumhuriyet University — M.Sc. Computer Engineering Sep 2025 – Present

Sivas Cumhuriyet University — B.Sc. Computer Engineering 2018 – 2024

Final-year project: a real-time mobile messaging application built with React Native.

LANGUAGES & ADDITIONAL

Languages: Turkish (native) · English (B2 — professional working proficiency)

Military service: Deferred until 2029 (graduate studies)

Work preference: Based in Istanbul; open to full-time on-site, hybrid or remote roles anywhere in Türkiye, and to relocation abroad

References: Available on request
